

AIC has been awarded the implementation of a new system for robot guidance by an Italian brass producer.

AIC has been awarded a contract for the complete supply of a robotic island suited to research the head of the coil and accomplish its introduction into the drawing line.

The customer, a leading manufacturer of brass bars, placed the order for the new mechatronic station following the successful implementation of previous robot guidance systems on the existing lines.

In the first project the customer's brass alloys with highly reflective surfaces were not allowing the proper performances of the existing vision system, AIC was therefore contacted to solve these issues.

Thanks to the engineering and the solution developed with the collaboration of the customer, the new AIC mechatronic system has been implemented and it's able now to solve both the robot guidance and material identification problems, achieving the great result of 99% operability.

About Companies:

AIC Group is a technological partner with extensive experience and deep know-how and stands itself as a global power control supplier and system integrator designing, manufacturing, and implementing automation systems, process control, and mechatronic solutions for both greenfield and revamping projects. Focusing on the steel and metals industries for long and flat products, the Group provides cutting-edge technical solutions by handling complex project schedules and thus establishing satisfactory and remarkable partnerships through its 6 international offices.

More than 45 years of modernization for endless reliability processes.
